All That Glitters Is Not Gold

Achieving Accurate Microplastics Measurements for Effective Management

Shelly Walther, Environmental Scientist, LACSD

Trash / Microplastics Breakout Session

Council for Watershed Health: State of the LA River
Watershed Symposium

September 19, 2023

OUR SERVICE AREA

My Areas of Focus

Supporting regulatory compliance by the wastewater sector

- Policy
 - CA Ocean Litter Strategy
 - SB 1263 – CA Microplastics Strategy
 - Microplastics Monitoring Playbook
- Environmental Monitoring
 - Ecological assessment of marine communities
 - Regional Kelp Forest monitoring
- Research
 - Microplastics: standardized methods (ASTM), study design, wastewater treatment, biosolids
 - Climate Change Issues: ocean acidification, ocean warming, shifting ecological baselines

California Senate Bill 1263 (2018): Statewide Microplastics Strategy

2022

- Initiate Statewide Microplastics Strategy

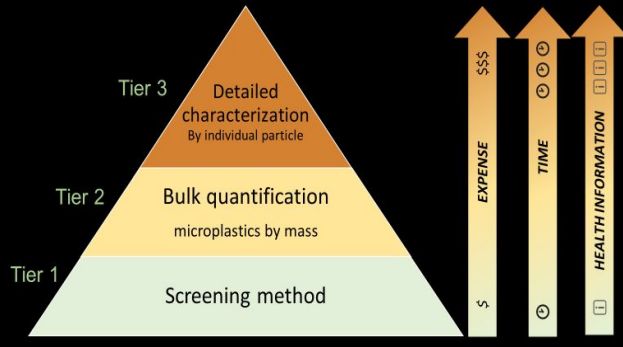

2026

- Develop **risk assessment** framework
- Develop standardized **methods**
- Establish baseline **occurrence** data
- Investigate **sources** and **pathways**
- Recommend **source reduction** strategies

Tiered Monitoring Framework

Tiered Analyses

Tiered Regulatory Thresholds

Increasing Microplastic Concentrations

Tier 5 - Highest Concern
Fish advisories, etc.

Threshold 4

Tier 4 - Elevated Concern
Mitigation strategies initiated

Threshold 3

Tier 3 - Moderate Concern
Investigate sources of

Threshold 2

Tier 2 - Low Concern
Increase monitoring frequency

Threshold 1

Tier 1 - No Concern
No action required

Why Do We Need A Microplastics Monitoring Playbook (MPMP)?

Method development for microplastic analysis in wastewater

67

- New discoveries lead to growing interest
 - Media coverage
 - Academic response
 - Many methods, many results
- Regulatory response
 - SB 1422
 - SB 1263

Figure 5.1 Logarithmic representation of total sample volume vs. calculated microplastic concentration, incorporating 51 secondary and tertiary final effluent samples pooled from 12 studies (Carr *et al.*, 2016; Dyachenko *et al.*, 2017; Gies *et al.*, 2018; Lares *et al.*, 2018; Mason *et al.*, 2016; Mintenig *et al.*, 2017; Murphy *et al.*, 2016; Simon *et al.*, 2018; Sutton *et al.*, 2016; Talvitie *et al.*, 2015, 2017; Ziajahromi *et al.*, 2017). Decreasing microplastic count trend as sampling volume increases with significant coefficient of correlation ($R^2 = 0.7315$).
From: Dyachenko *et al.* 2019

MPMP: Guidance on Microplastics Analyses

We need to:

- Be **confident** we're **accurately** quantifying and characterizing the microplastics in the sample
- **Quantify** plastics down to as low a size as possible
- Know the characteristics of each microplastic **particle**
- Avoid **false positive** and **false negative** identifications
- Avoid and quantify **contamination**
- Use a method that is **accurate, fast, AND** cost-effective

Orders of Magnitude Differences in Estimates of Microplastics in Water Bodies

LA River/San Gabriel River (Wiggin & Holland 2019)	45,000-808,000 MP/m ³	LB State, vast majority in the 200um-300um Range
Long Beach Harbor (Moore 2011)	12,932 MP/m ³	Algalita 300um net
San Francisco Bay (Sutton 2016)	8 MP/m ³ *	SFEI, 300um net
Great Lakes (Baldwin 2016)	8.6g MP/m ³ *	USGS
World-wide (Hamid 2018)	1-102,000 MP/m ³	Various highest is Portugal (Noren 2007)

Analysis: Microscope & Infrared Spectroscopy

Look-a-like Particles

Regulatory Thresholds: What's in a Number?

What does this mean?
Particle counts
The smaller the
particles you can
see, the more you
will find.

Measurement Uncertainty

There are many sources of variability in microplastics measurements

Sampling

Sub-sampling

Sample Prep

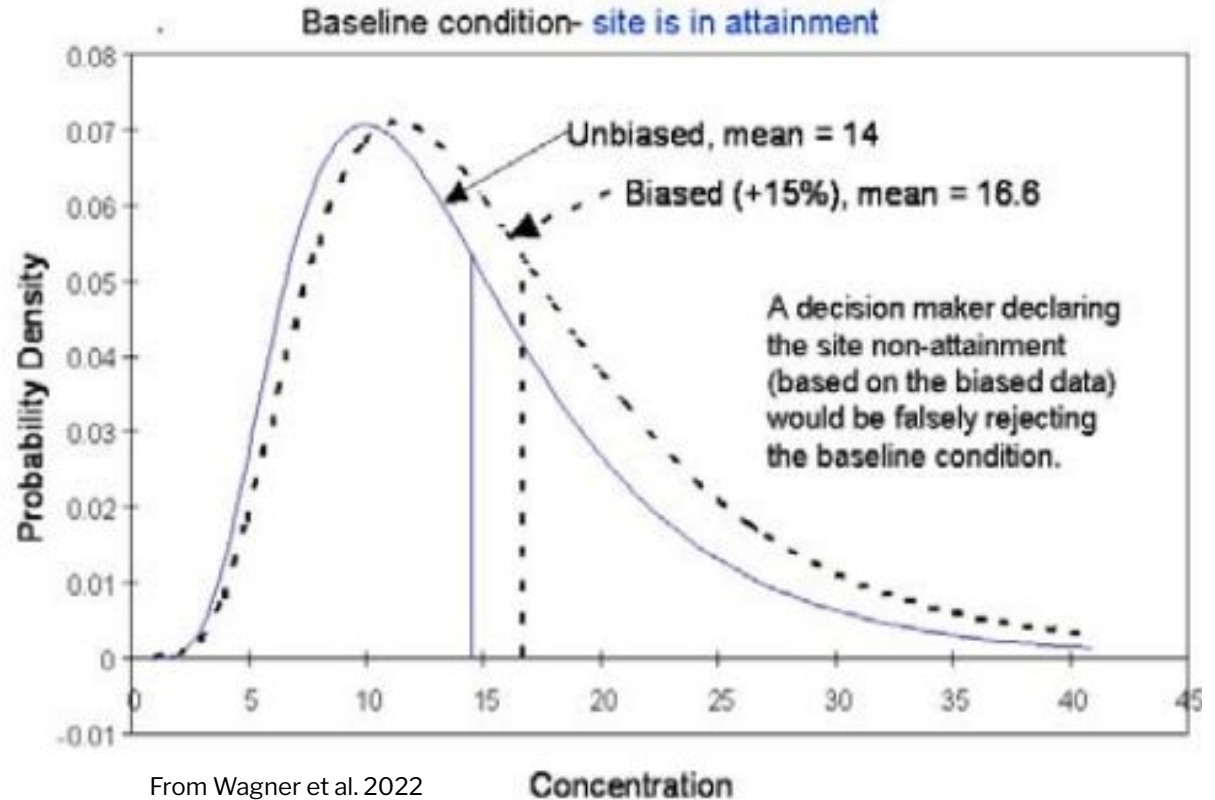

Analysis

Data Reproducibility Is Critical

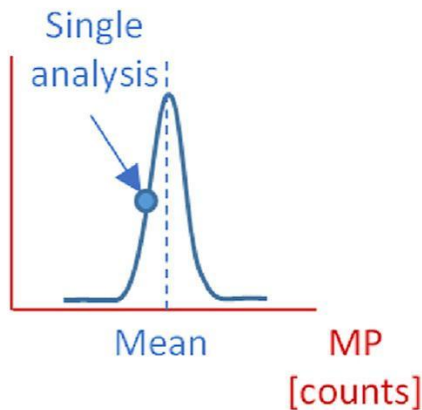

Quantifying Measurement Uncertainty

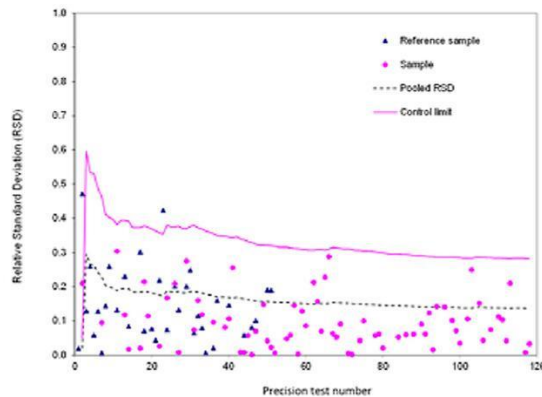

From Wagner et al. 2022

Error
bars

From Wagner et al. 2022

Microplastics Monitoring Playbook (MPMP): To Help Improve the Science

- Study design
- Sample collection & analysis
- Data analyses & reporting
- Reproducibility

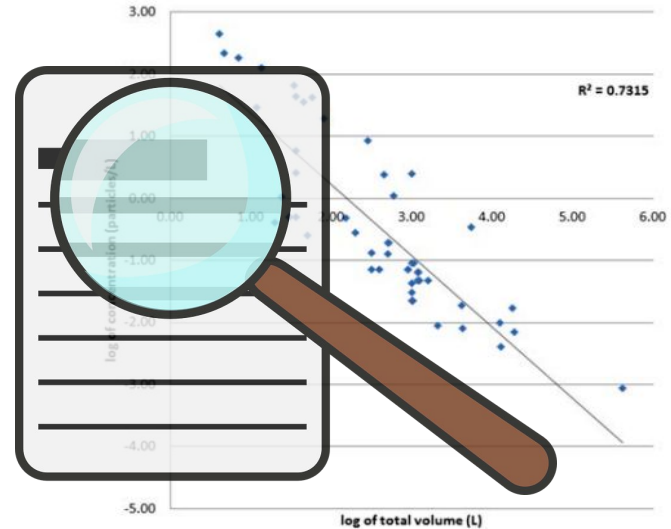

Figure 5.1 Logarithmic representation of total sample volume vs. calculated microplastic concentration, incorporating 51 secondary and tertiary final effluent samples pooled from 12 studies (Carr *et al.*, 2016; Dyachenko *et al.*, 2017; Gies *et al.*, 2018; Lares *et al.*, 2018; Mason *et al.*, 2016; Mintenig *et al.*, 2017; Murphy *et al.*, 2016; Simon *et al.*, 2018; Sutton *et al.*, 2016; Talvitie *et al.*, 2015, 2017; Ziajahromi *et al.*, 2017). Decreasing microplastic count trend as sampling volume increases with significant coefficient of correlation ($R^2 = 0.7315$).

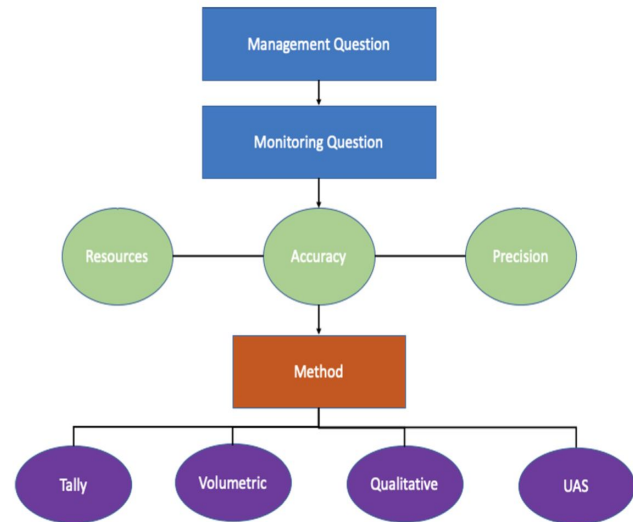

From: Dyachenko et al. 2019

The Microplastics Monitoring Playbook will be Modeled on the CA Trash Monitoring Playbook

California Trash Monitoring Methods and Assessments Playbook

METHOD CONSIDERATIONS

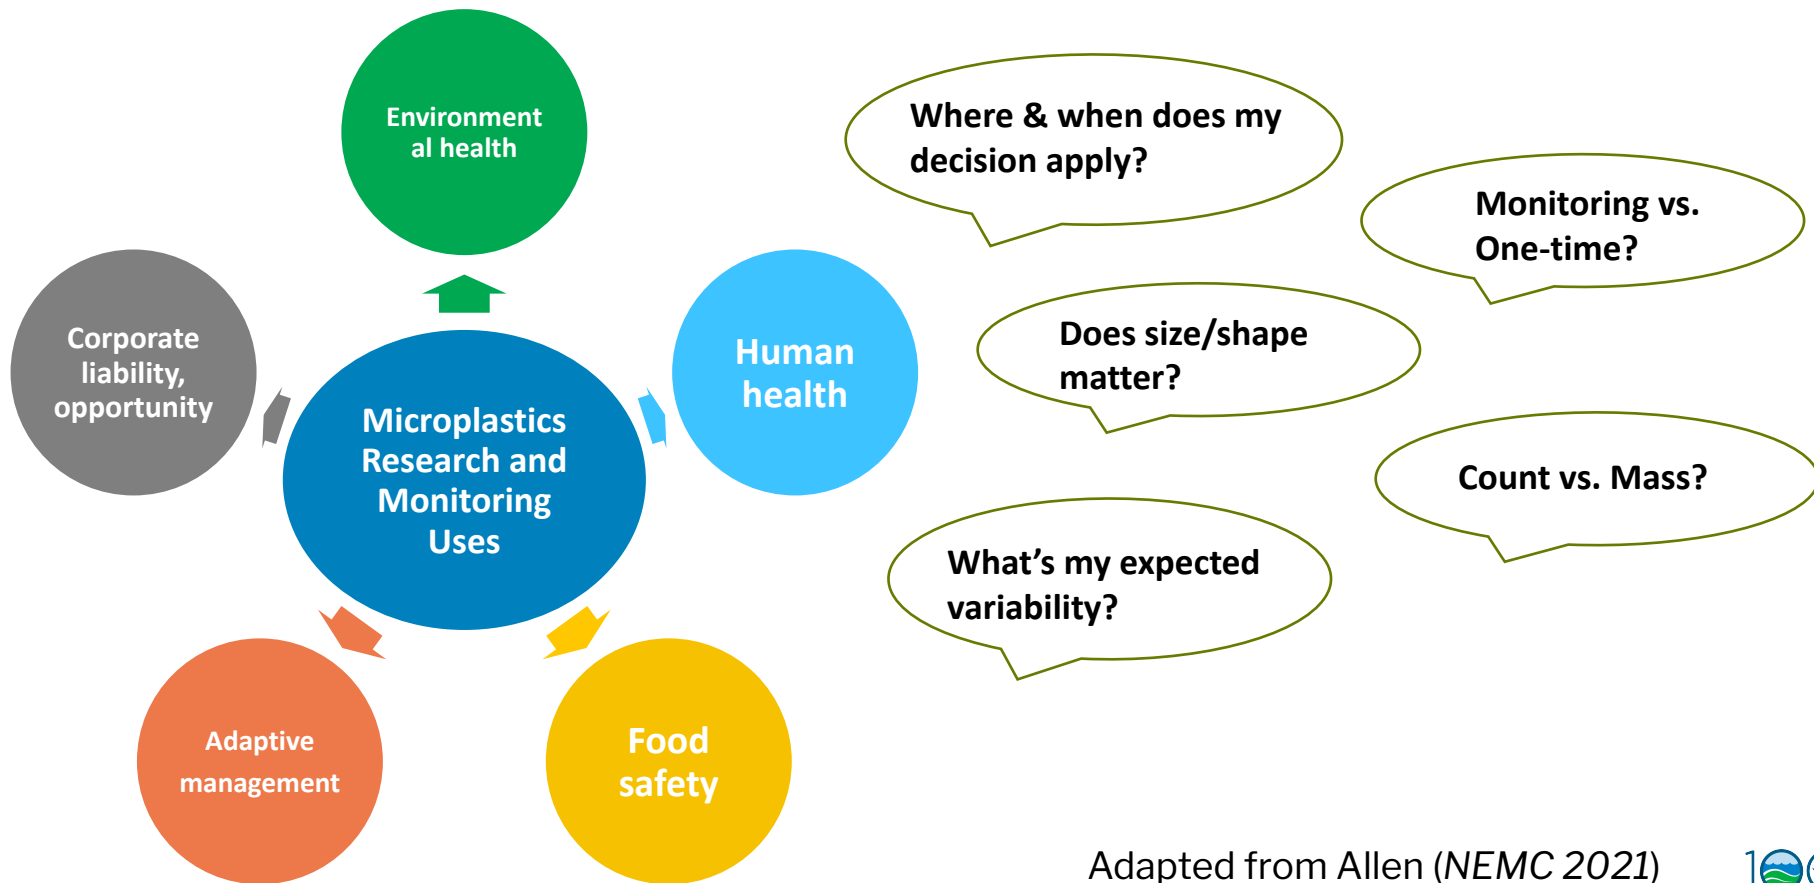

The Trash Monitoring Playbook Includes:

- Field Sampling Considerations
- QA Requirements
 - Training Materials
 - Field Audits
 - Data Record Review
- Consistency in Measurements for Comparability
 - Standard Operating Procedures
 - Tiered Method Approach
 - Training
 - Vocabulary
 - Recommendations of amount/unit area measurement
- Data Capture and Standardization
 - Forms and Data
 - Machine-learning algorithm
 - Mobile App for Field Stations

California Trash Monitoring Methods and Assessments Playbook

Study Design Depends on the Application
